

UDITYA NARAYAN TIWARI

Jaunpur, Uttar Pradesh

 [LinkedIn](#)  [GitHub](#)

SUMMARY

Computer Science Engineering student specializing in AI/ML at VIT Bhopal University with strong foundations in machine learning, data analysis, and software development. Experienced in developing ML-based applications and predictive models and MCP Servers using Python and modern data science tools, with a keen interest in solving real-world problems through AI-driven solutions

EDUCATION

VIT Bhopal University, Kothrikalan

2023 – Present

B.Tech - Computer Science Engineering with AI & ML - CGPA: 9.00

VIT Bhopal University

EXPERIENCE

Core Member, Matrix Media Club

Jan 2025 – Jul 2025

Tech Team Member

VIT Bhopal University

- Developed smart applications to improve communication between event hosts and clients.

Technical Member, Microsoft Learn Student Chapter

Apr 2025 – Apr 2026

Tech Team Member & Community Admin

VIT Bhopal University

- Organized technical workshops and Hackathons for Microsoft technologies.

PROJECTS

Smart Medical Care For Rural Areas | Python, NLP, Flask

Nov 2025

- Developed an AI-powered medicine recommendation system using NLP for symptom-based medicine suggestions.
- Implemented Sentence Transformers with cosine similarity and MMR ranking for accurate symptom-to-medicine matching.
- Built data preprocessing pipelines and deployed the system using a Flask backend for real-time recommendations.

Credit Card Approval Prediction | Python, Scikit-learn, Pandas

Jun 2025

- Built a machine learning classification system to predict credit card approval using applicant financial and demographic features.
- Conducted exploratory data analysis, feature engineering, and trained multiple models including Logistic Regression, Decision Tree, and Random Forest.
- Achieved ~91% prediction accuracy with Random Forest and identified key approval drivers such as income stability and employment duration.

Breast Cancer Prediction using ML Models | Python, Scikit-learn, Jupyter

Sep 2024

- Developed a machine learning classification model using the UCI Breast Cancer dataset (569 samples, 30 features).
- Implemented and compared 5 ML algorithms including Logistic Regression, Decision Tree, Random Forest, SVM, and k-NN.
- Achieved ~97% accuracy using Random Forest and evaluated performance using ROC-AUC and confusion matrix.

SKILLS

Languages: Python, C++, Java, C, SQL

Technologies/Frameworks: NLP, Scikit-learn, Data Preprocessing, ML Model Evaluation, MCP Servers, OOPs, Algorithms & Data Structures

Developer Tools: VS Code, PyCharm, IntelliJ, Canva, Kaggle

Soft Skills: Leadership, Teamwork and Collaboration, Communication, Problem-Solving, Time Management, Multitasking

CERTIFICATES

- Geodata Processing using Python (IIRS, ISRO) - Feb 2024
- AI/ML For Geodata Analysis Indian Institute of Remote Sensing (IIRS), ISRO - Sep 2024
- IU Indianapolis Insights on Computational Data Science (IU Indianapolis) - Nov 2024
- Final Round Qualifier, VIT Bhopal x Johns Hopkins University International Hackathon - Jan 2025
- First prize winner in VIT Bhopal University Hackathon - Feb 2025
